

BREATHTAKING BUILDING 101

A COURSE ON THE RENOVATION
OF
THE UNIVERSITY OF CALIFORNIA
AT SAN DIEGO

TRESPA®

Trespa® Meteon®

The Educated Choice

Today's campuses and educational facilities demand building products that are both durable and fashionable. Trespa® Meteon® is an especially appropriate building material for learning facilities because years of research, expertise and knowledge went into its development. The result is a truly state-of-the-art exterior facade—that also makes a powerful design statement.

Trespa® Meteon® is also durable and cost-effective for new construction and re-cladding,

is weather and chemical-resistant, and is easily field-modified with wood working tools.

Meteon® was specified for several major projects at the University of California San Diego (UCSD), where some of the university's most important work and research is being performed. Trespa® is proud to have participated in creating the best possible work environments for the students, professors and staff of UCSD.

For design freedom, think Trespa®

Rady School of Management UC San Diego

The Rady School's on-campus building, Otterson Hall, was designed to promote the interaction of the school with the UC San Diego campus as well as the wider San Diego community. The 50,000 square foot facility includes classrooms, conference rooms and common areas for students, as well as faculty and staff offices. Rady School academic programs place an emphasis on issues faced

by companies in the life sciences and technology sectors, where constant innovation is required.

Virtually every aspect of the building was designed with the environment in mind, including natural ventilation, durable Trespa® Meteon® exterior cladding and energy efficient lighting.

UCSD Rady School of Management

Location: UCSD Campus, La Jolla, CA

Function: Education

Architect: Ellerbe Becket

Color: Custom color

Texture: Satin

Fixing System: TS110 Visible (exposed) fixing with screws on an aluminum subframe and TS210 Invisible (concealed) bracket-railfix on an aluminum subframe

Square Footage: 45,000

Telemedicine and Prime HEq Facility

Location: UCSD Campus, La Jolla, CA

Function: Education

Architect: Skidmore, Owings & Merrill

Color: Custom color

Texture: Satin

Fixing System: TS210 Invisible (concealed) bracket/rail/fix on an aluminum subframe

Square Footage: 16,710

For versatility, think Trespa®

Telemedicine and Prime HEq Facility

This building provides 92,000 square feet to accommodate new programs in Medical Education and support a major new telemedicine initiative to improve health care access to medically underserved and other “at risk” populations. The facility includes instruction, academic office and support, patient care, and student support space for

the School of Medicine, including a surgery teaching laboratory.

In addition to cladding, Trespa® Meteon® is also ideal for fascias, storefronts, soffits, balconies and balustrades.

IN PROGRESS:
UCSD Rady School of Management Phase II

Location: UCSD Campus, La Jolla, CA

Function: Education

Architect: Ellerbe Becket

Color: Custom color

Texture: Satin

Fixing System: TS210 Invisible (concealed) bracket+railfix on an aluminum subframe

Square Footage: 23,700

For panels that endure, think Trespa®

Rady School of Management Phase II

In 2007, the first phase of the Rady School of Management was completed and provided 83,000 square feet of classroom, office and student support space. The Phase II project adds 80,000 square feet, including additional classrooms, an open class laboratory, faculty and administrative offices, conference rooms, an auditorium, and student work and study areas.

This project will accommodate faculty and students in the Masters of Business Administration (MBA) and Doctor of Philosophy (PhD) programs as well as continuing professional education for the business community.

For new vision, think Trespa®

Sanford Consortium for Regenerative Medicine (SCRM)

The Sanford Consortium for Regenerative Medicine combines the intellectual resources of four of the world's leading biomedical research institutions to enable San Diego's brightest researchers to harness the regenerative power of stem cells to develop means to diagnose, treat and ultimately cure degenerative diseases and injuries. The 135,000 square foot facility includes research

laboratories, office space, building support space, and serves as a hub of innovative multidisciplinary, translational, and preclinical research and outreach programs.

Trespa® Miteon® is available in dozens of colors, including solids, metallics, naturals and wood decors. Textures include satin, gloss, and rock.

Sanford Consortium for Regenerative Medicine (SCRM)

Location:	UCSD Campus, La Jolla, CA
Function:	Education
Architect:	Lankford and Associates
Color:	M 12.4.2 – Garnet Red and A 05.1.0 – Papyrus White
Texture:	Satin
Fixing System:	TS110 Visible (exposed) fixing with screws on an aluminum subframe
Square Footage:	16,764

UCSD (IT)²

Location: UCSD Campus, La Jolla, CA

Function: Education

Architect: NBBJ

Color: M51.0.1/GL and M21.8.1/ST

Texture: Satin

Fixing System: TS210 Invisible (concealed) bracket/rail/fix on an aluminum subframe

Square Footage: 18,000

For healthier buildings, think Trespa®

UCSD (IT)²

Over 18,000 square feet of Trespa® Meteon® was utilized for a stunning rain screen cladding system at the California Institute for Telecommunications and Information Technology, or UCSD (IT)². Meteon® was selected since it provided the required high-tech look that is also weather resistant, color stable, impact resistant and easy to clean.

As a rain screen cladding system, Meteon® provides the building envelope superior protection from the elements. The open joint system minimizes the amount of water penetration and the system's ventilation allows moisture to drain out of wall construction.

From inspiration to information.
